Bostik Selects E.V. Roberts as First US Aerospace Distributor

Carson, California; August 5, 2010 – Bostik® Inc., a world-leading adhesive and sealant manufacturer, has selected E.V. Roberts as their first authorized distributor to focus specifically on the US aerospace industry.

Bostik is a recognized leader in developing and manufacturing products for transportation applications in automotive, marine and aerospace industries. They are committed to providing sustainable and innovative solutions - combining technological performance, ease-of-use and cost effectiveness.

“We are honored that Bostik has selected us as their first distributor exclusively-focused on aerospace,” said Lyndon Smith, President of E.V. Roberts. “Their pursuit of innovation and customer support mirrors our own culture and we look forward to bringing their technologies to our aerospace customers.”

E.V. Roberts is an award-winning leader in the distribution of engineered materials. They are a preferred supplier to leading OEMs, suppliers, MROs and government agencies in the aerospace, electronics and specialty manufacturing sectors.

“We are excited to have E.V. Roberts as our first aerospace-specific distributor,” said Michael Prummer, Head of Aerospace New Business Development for Bostik’s Transportation Division, “their technical expertise and extensive aerospace experience complements our product technologies.”

E.V. Roberts was founded in 1938 and distributes, custom formulates and packages engineered materials for aerospace, electronics and specialty industrial applications. With headquarters in Carson, California, they maintain ISO9001:2008, AS9100 (Rev. B), AS9120, as well as military and OEM-based quality certifications.

Bostik®, Inc., is one of the largest manufacturers of adhesives and sealants in the world. The company operates production facilities and sales offices in dozens of nations across five continents. Bostik’s Transportation Division provides a full range of material technologies designed for the production of ground and rail vehicles, as well as marine and aerospace applications.
