Seasoned Aerospace Chemist joins E.V. Roberts' Technical Team

The E.V. Roberts team has added Doug Soden, who assumes the role of Lead Chemist – providing technical support for commercial material applications and managing the Resin Formulators[®] custom development laboratory.

Doug brings over 20 years of aerospace chemical and materials experience with industry stalwarts such as Boeing, BP Chemical, Space Payloads, HITCO and more. As a technical leader within these companies, his portfolio of accomplishments is very broad and includes:

- Concept-to-production development of specialty resins
- Reductions of costs related to resin manufacturing
- Support of patentable materials synthesis processes
- Performance improvements to existing material technologies
- Creation of a patented material handling process

Doug is also well-affiliated within the materials industry, including the Society for the Advancement of Materials and Process Engineering, Society of Plastics Engineers and the American Chemical Society.

Doug most recently worked as a Chemist / Engineer at Boeing's facilities in Huntington Beach, CA, where he supported materials applications and developed performance parameters and requirements across a broad spectrum of aerospace applications.
