

Aqueous-Based PolyWipes™

If you have always felt there must be a better way of cleaning up, you were correct! RPM Technology is proud to introduce a revolutionary product for anyone using sealants, mastics, adhesives, silicones, paints, drilling oils, or greases. PolyWipes contain no solvents or abrasives; no fuss, and no mess!

Why clean your hands with a product that has a NFPA health rating of 1 and is flammable? PolyWipes have a health rating of 0 and are NOT flammable! They safely remove uncured or partly-cured adhesives and sealants by breaking the surface tension between the material and the substrate. The material then transfers to the wipe for disposal. PolyWipes are available in convenient resealable tubs each containing 150 wipes.

Advantages

- **Biodegradable** - a "green" product
- **Non-Toxic** - eliminates the need to dispose of hazardous solvents
- **Non flammable, unlike other wipes**
- **Mild** - employees may not need hand protection to use this product, NFPA rating is 0,0,0
- **Inexpensive** - less expensive than cloth towels and solvents

Uses

PolyWipes can be used anywhere adhesives or sealants are applied. Industries that are benefiting from using our product include:

- **Aviation** - Uses PolyWipes to clean up after applying sealant to fuel tanks, access doors, windshields, and any other location on the aircraft where sealants are used.
- **Marine** - Uses PolyWipes to clean up after applying adhesives in the construction of fiberglass watercraft and during repair.
- **Construction** - Uses PolyWipes to clean any excess caulking or sealant from windows, doors, bathrooms and kitchens.
- **Manufacturers using adhesives or sealants** - Uses PolyWipes to remove excess uncured adhesives or sealants in manufacturing and assembly processes.
- **Machine Shop** - Uses PolyWipes to remove drilling oils, grease, and other contaminants from finished parts.
