

QUALITY CERTIFICATIONS

E.V. Roberts, Resin Formulators and Chemical Packaging Solutions are fully qualified to design, manufacture and distribute products to a variety of industries.

We are independently certified by PRI Registrar to three rigorous international quality standards: ISO9001:2000, AS9100 (Rev. B) and AS9120. To verify compliance with their requirements, we engage in routine on-site examinations and audits of our processes.

These certifications, along with stringent self-examination practices, help ensure that we provide the highest quality products and services to our customers.

ISO9001:2000

This international quality management standard applies to any manufacturing or service industry. It focuses primarily on the order fulfillment process - establishing specific requirements for quality, service and management procedures. Due to its broad scope, it is the most widely-recognized quality standard, with global acceptance in over 150 countries.

AS9100 (Rev. B)

This specialized aerospace standard is recognized by all aerospace manufacturers in North America, Europe and Asia. It encompasses all requirements from ISO9001:2000 and adds 80 supplemental requirements to reflect exacting aerospace standards. This standard is comprehensive - addressing the procedural aspects of our quality management system as well as system effectiveness. This certification represents the highest operational standards within the aerospace industry.

AS9120

The AS9120 standard defines strict traceability and material management criteria for distributors to the aerospace industry. Certification to this standard represents a commitment to customers and channel partners that our quality management system for order fulfillment meets or exceeds world-class benchmarks.

In addition to these quality standards, E.V. Roberts also fully complies with:

- *MIL-STD-45662A: Calibration System Requirements*
- *MIL-I-45208A: Inspection System Requirements*
